***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, the paragraph beginning line 6, there is no antecedent basis for "said securing set" and it is unclear what is intended by the resilient element being "buckled" to the outer part of the securing set. The claims were examined as best understood.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art (Figs. 11 and 12) in view of Ernest (US 3,465,803). The admitted prior art (APA) discloses a fixing member comprising: a screw having a positioning element (A) with a socket and surrounded by a knob with a grip; a securing set (B) with buckling grooves (B2) and; a resilient element positioned in a receiving space in the knob and a securing set to bias the screw relative to the securing set. The screw element further includes an inlaid fixing lid (C). Ernest discloses each of the top

of the securing set and the bottom of the flange provided with a buckle (B1, A2) but does not disclose a thread at the top of the securing set and bottom of the flange.

Ernest teaches the equivalence of the buckle (449, Fig. 14) and a thread (520, Fig. 15) in a fixing member. At the time the invention was made, it would have been obvious for one of ordinary skill in the art to replace the buckle of the prior art with a thread in view of the teaching of Ernest. Indeed, the thread would be advantageous over the buckle since the thread would allow for removal. Once the combination was made, the thread would inherently include supporting portions.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
